Listing of Claims:

- 1. (Currently Amended) A modular system having adjustable units for use inside closets of different widths, the system comprising a main tower module based on lateral screens and multiple shelves, wherein one of the lateral screens is taller than the other, said main tower module being fastened onto an enclosure space in a fixed position and is combined on its sides with hanging modules, one of the hanging modules accommodating long clothes and having a shelf panel placed in its upper part and having a hanging pipe held by fastening elements on an enclosure wall and on the main a shorter tower lateral screen; the other hanging module is a double hanging module having two hanging sections with two hanging pipes held by fastening elements on the opposing enclosure wall and on the main a taller tower lateral screen, the edges of the lateral screens being reinforced with extruded plastic profiles.
- 2. (Currently Amended) A modular system according to claim 1, wherein each lateral screen has two coupled sections to form a single lateral screen, the coupling being through metal, wooden or plastic tongued and grooved elements [in the case of popular finishing] or reinforced with extruded plastic profiles.
- 3. (Currently Amended) A modular system according to claim 1, wherein the double hanging module has a shelf panel that is supported on the taller screen of the main tower module and on the fastening element of the upper hanging pipe, said shelf panel is fastened onto the a back wall through fastening elements and a supporting element for excess load, the supporting element being a fork type which opposes compression stresses.

- 4. (Currently Amended) A modular system according to claim 1, wherein the main tower module includes sliding chests of drawers with edges lined and reinforced with extruded PVC edges or with plastic tape.
- 5. (Currently Amended) A modular system according to claim 4, wherein <u>each</u> of the drawer has members which are assembled through grooved channels, the lateral members joined onto the back member through screws and the front member is joined to the lateral members through plastic fastening corner elements having on one of their faces bolt protuberances adjusted to the holes <u>in one of the members</u> made in the shelves and on the other side the corner elements are fastened through screws; said drawer being moved through sliding elements.
- 6. (Currently Amended) A modular system according to claim 1, wherein the hanging pipes are made of steel of oval cross section and covered with polyvinyl chloride (PVC), said fastening elements being fastened onto the wall of the enclosure or onto the lateral screens of the main tower module through screws.
- 7. (Currently Amended) A modular system according to claim 1, wherein the shelves of the main tower module can be fastened to the <u>respective screens</u> wall and at different spaces, larger or smaller, depending on the need of user.

- 8. (Currently Amended) A modular system according to claim 1, wherein the lateral screens are no larger than half the size of the depth of the shelves, thereby facilitating ventilation and elimination of moisture.
- 9. (Currently Amended) A modular system according to claim 1, wherein <u>each</u> of the shelf contains veneer strip with portions on the left and right side edges and can include in their left and right side edges a "U" shaped total or partial reinforcement to increase their mechanical strength, fastened through screws.
- 10. (Previously presented) A modular system according to claim 1, wherein the thickness of the lateral screens is the same as the thickness of the tower shelves.
- 11. (Previously presented) A modular system according to claim 3, wherein the main tower module includes sliding chests of drawers with edges lined and reinforced with extruded PVC edges or with plastic tape.
- 12. (Previously presented) A modular system according to claim 8, wherein the lateral screens have a depth of 20 cm.
- 13. (Previously presented) A modular system according to claim 1 wherein the shelves are made of agglomerated material.

- 14. (Previously presented) A modular system according to claim 13 wherein the shelves are 40 cm deep and 61 cm long.
- 15. (Currently amended) A modular system according to claim 1 wherein the lateral screens <u>further comprise non-reinforcement</u> are not reinforced with extruded plastic profiles or veneer strips.
